

Core Emergency Response Team Training

When the risks on your site have a high adverse outcome rating, it is critical that core personnel have sufficient emergency management training to be able to safely and effectively respond to an unfolding incident.

Course Content

This course covers the core skills and knowledge required for your workplace emergency management teams.

- Emergency Management Overview
- Incident Analysis and Response Strategy
- Emergency Response Team Responsibilities
- Effective Response Techniques and Tactics
- Equipment Review (Getting the best from your gear)
- Practical ERT Drills using equipment on site and Spill Station supplied equipment

Participant Prerequisites

- Use literacy and numeracy skills as required to read, interpret and apply guidelines and protocols
- Use literacy and numeracy skills to adequately interpret documentation available in line with State/Territory regulations, legislation and policies

Participants are required to be on time for all courses and bring a form of identification such as drivers licence or Medicare card for verification of details listed on the course enrolment form.

Trainer Requirements

- Training room
- Space for practical training and drills
- Access to current emergency response equipment
